5G/LTE Senior Algorithm Engineer

Apply Now

Company: Jobinfo

Location: Ramat Gan

Category: other-general

Job Description:

For a hi-tech company developing hardware components for communication devices, with offices in the center

To be responsible for designing and specifying new architectures / algorithms for the physical layer of our 5G wireless products (3GPP NR/LTE Rel15 and beyond), working closely with our Software, ASIC and Integration teams, including:

Monitoring 3GPP NR/LTE standards and translate them to algorithm feature requirements; Specifying the architecture and software-hardware breakdown for 5G physical layer procedures; Designing new algorithms / defining new architectures for future products related to 5G/NR/LTE; Implementing and validating the methods utilized in the DSP team's baseband simulator; Producing and updating design / performance documents in parallel to the development process; Supporting our ASIC team for Verilog/VHDL implementation

Additional Positions:

Category:

Job Qualifications:

At least 5 years of experience in development of wireless communication PHY layer Algorithms

Proven experience in algorithm development for LTE/NR

Fast learning capabilities, highly motivated, self-starter, autonomous

Ability to work in a fast moving and multicultural environment

Excellent written and oral communications skills, fluent English

Company Occupation:

High Tech, Semiconductor/capital equipment

Company Size:

Medium (50 - 150)
