Company: BMC Software, Inc.

Location: Israel

Category: other-general

Description and Requirements

#LI-R11

At BMC trust is not just a word - it's a way of life!

We are an award-winning, equal opportunity, culturally diverse, fun place to be. Giving back to the community drives us to be better every single day. Our work environment allows you to balance your priorities, because we know you will bring your best every day. We will champion your wins and shout them from the rooftops. Your peers will inspire, drive, support you, and make you laugh out loud! We help our customers free up time and space to become an Autonomous Digital Enterprise that conquers the opportunities ahead - and are relentless in the pursuit of innovation! The Control-M product line is BMC's orchestration and automation platform. It helps the world's largest companies to automate time-sensitive, business-critical workflows. We orchestrate data and machine learning pipelines, supply chains, production lines, financial transactions, and other processes in complex IT environments worldwide. We continuously grow by adding and implementing the most cutting-edge technologies, conducting innovative Just Do It marathons, thinking about new features to add and investing in our employee training programs!

BMC is seeking talented **Automation Engineers** to join our team!

As an Automation Engineer, you'll work on complex and distributed software, develop automated tests, execute test plans, and ensure product quality.

This is the perfect opportunity if you're curious, self-motivated, people-oriented, and a team player who loves learning and evolving.

You'll play a key role in our innovative automation project and team, with ample opportunities to grow and challenge yourself.

Here is how, through this exciting role, YOU will contribute to BMC's and your own success: Your daily tasks will include planning, developing, and executing automated tests and strategies for both frontend and backend testing, working with other engineers to define and assess deliverables, and ensuring quality deliverables for assigned projects. **To ensure you're set up for success, you will bring the following skillset & experience:**

2+ years of experience in automation testing on the server side

Proficiency in Python or Java.

Familiar with agile software development methodologies, life cycles, and processes

Excellent English communication skills (both verbal and written)

Whilst these are nice to have, our team can help you develop in the following skills:

Experience with Robot framework, Jenkins CI, SQL,

Technical knowledge and experience with Windows, Unix/Linux

A degree in software engineering, computer science, programming, or equivalent practical experience.
