

## FW Engineer C

[Apply Now](#)

Company: Jobinfo

Location: Azor

Category: other-general

### **Job Description:**

For a hi-tech company developing satellite communication technologies, with offices in the Shefela area

### **Additional Positions:**

### **Category:**

### **Job Qualifications:**

Requirements:

B.Sc in Electrical/Computer Engineering or Computer Science, or related discipline

3+ years of experience in low-level real-time/embedded programming and firmware architecture

Experience in C programming language

Experience in physical layer (L1) communication protocols implementation

Experience with reading HW specifications and developing low level drivers

Self-learning capabilities, adapt to changes and study new technical fields

Effective teamwork and collaboration skills

Knowledge in digital signal processing algorithms and/or RF systems – Important

Advantage

Experience in RF lab work and testing equipment (Spectrum Analyzer, Signal Generator, etc.) – Advantage

Basic knowledge of Matlab and Python - Advantage

#### Job description:

Develop Physical Layer firmware for satellite standards

Participate in the development of low level drivers, BSP in Bare metal or RTOS environment

Collaborate with HW team and Participate in the early HW development verification SW testing

Design of firmware architecture, from top-level down to block-level

Define and write high-level design documents for DSP processor

Optimize and debug firmware for performance and throughput

Development in C, assembler and core specific instructions

#### Company Occupation:

High Tech

#### Company Size:

Medium (50 - 150)
