Company: Jobinfo

Location: Ramat Gan

Category: other-general

Job Description:

Design, implementation and debugging of real-time firmware for Data Link Layer and Physical Layer :

- Embedded communications system:
- Development of detailed SW design documents
- Development of firmware modules for the PHY and Data link layers of communication system
- Development of HW drivers for custom programmable hardware
- Implementation of standard communication protocols
- Optimize existing code to meet hard real time requirements
- Integration and bring up of new firmware and SoC.

Additional Positions:

Category:

Job Qualifications:

- Excellent knowledge of C programming
- Proven experience (6+ years) in development of real-time embedded firmware
- Experience in low-level programming (HW drivers, SW infrastructures etc.)
- Experience with developing communication systems (especially PHY layers) -an advantage
- Experience working for a Silicon company developing new SOC an advantage -an advantage
- Experience with networking an advantage
- Good understanding of communication systems, hardware and digital design
- Graduate in Computer Science, Computer Engineering, Engineering or Electrical

Engineering, or any other technical degree, or students in their third year.

- Excellent verbal and written communication skills in English

Company Occupation:

High Tech, Semiconductor/capital equipment
