JOB DESCRIPTION:

Position Description

's Medical Device business is looking for a Senior DevOps Engineer for their engineering business. This position will be responsible for design & development of automation activities to support continuous integration along with the client's DevOps Team.

Location: Pittsburgh,

Position Responsibilities

• Working closely with the developers and test engineers for the Build, Test, Release, Configuration Management activities (Source Control, Continuous Integration, Continuous Testing, Configuration Management)

• Manage the Branching & Merging Strategy

• Manage the application life cycle development processes- from development, to QA and production stages

• Adhering to the build and release timelines

• Create Installation Packages / Update Installers with VMWare updates

Position Requirements:

• Bachelor's degree in engineering in Computer Science, Information Systems, Biomedical or related field

• Strong skills in Make, CMake, Bash Scripting, CShell Scripting, Python Scripting

• Proficiency in creating Infrastructure-as-Code

• Setting Up / Optimizing the Jenkins pipelines on Ubuntu , and Ubuntu

• Creating product installers on Linux

• Experience of DevOps on GitLab, Jenkins, Automation of the build systems

• Understanding of C++ compilers

• Troubleshooting on Jenkins including node maintenance and setup

• Expertise in implementing strategies on optimization in product delivery using CI/CD

• SOUP selection and maintenance

• Expertise in AWS cloud, Antifactory for CD

• Knowledge of Medical Device based software CI/CD would be good to have

• Must have excellent written and verbal communication skills
